## WALKER

this 2 wheeled mobility aid helps support someone with walking.

Possible upgrades/features:

- tray
- glides
- bags

## ROLLATOR

this 4 wheeled mobility aid supports someone walking more quickly. Normally has brakes in the handles.

Possible upgrades/features:

- seat
- tray

## WHEEL CHAIR

larger back wheels allow a seated person to self propel.

Possible upgrades/features:

- recline
- wider seat sizes
- elevated leg rests
- head rest

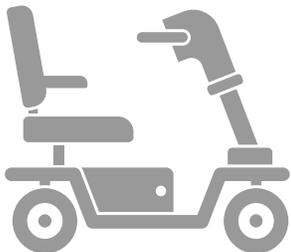

## TRANSPORT CHAIR

designed for a caregiver to push a seated person. Generally lighter to transport than a wheelchair.

Possible upgrades/features:

- recline
- wider seat sizes
- elevated leg rests
- head rest

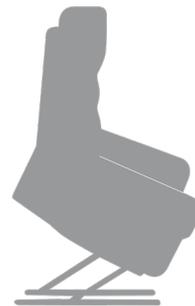

## SCOOTER (Electric)

motorized scooter can be used for more independence.

Possible upgrades/features:

- 3-wheel or 4-wheel
- seat size, swivel chair
- headlight, battery life, speed
- suspension, portability

## LIFT CHAIR

these medically designed chairs help users recline, sleep, stand up and sit down safely.

Possible upgrades/features:

- recline to elevate feet/knees above heart
- heat/massage/remote
- size matters

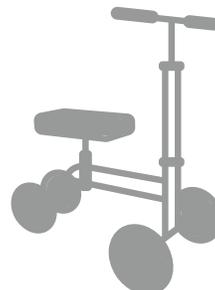

## POWER CHAIR (PWC)

this electric chair will transport independently indoors or outdoors.

Possible upgrades/features:

- swivel chair, elevating seat
- joystick control options
- transportable, vehicle restrains

## KNEE SCOOTER

easily get around without putting weight on a specific leg or foot.

Possible upgrades/features:

- basket
- hand brakes
- rugged tires
- suspension
